

## Code\_Saturne 4.3.3 Quick reference card

### User scripts

All *Code\_Saturne* commands are available under a single script: `code_saturne`. Here below are the most useful commands for a *Code\_Saturne* user from the study creation to the post-processing. Complete information for each command can be obtained by typing:

`code_saturne <command> --help`.

- **info**

Get information on *Code\_Saturne*. Open the documentation (user, theory, tutorial).

*e.g.* `code_saturne info --guide user`

- **config**

Get information on the configuration and installation of *Code\_Saturne*.

*e.g.* `code_saturne config`

- **create**

Create a *Code\_Saturne* template study or case.

*e.g.* `code_saturne create --study study1`

- **gui**

Launch *Code\_Saturne* graphical user interface.

*e.g.* `code_saturne gui --file xmlfile`

- **compile**

Create a specific solver executable when some user subroutines are present.

*e.g.* `code_saturne compile --test`

- **autovnv**

Launch the auto-Validation tool.

*e.g.* `code_saturne autovnv --file xmlfile --run`

### Main user subroutines

Here below are the most useful user subroutines to run a standard simulation. Some of them are useless if the graphical user interface is used.

- **cs\_user\_parameters.f90**

Initialization of the main keywords.

- **cs\_user\_boundary\_conditions.f90**

Management of the boundary conditions.

- **cs\_user\_physical\_properties.f90**

Management of the variable physical properties.

- **cs\_user\_INITIALIZATION.f90**

Non-standard initialization of the variables.

- **cs\_user\_EXTRA\_OPERATIONS.f90**

User project files.

- **cs\_user\_HEAD\_LOSSES.f90**

Management of the head loss.

- **cs\_user\_SOURCE\_TERMS.f90**

User source terms related subroutines.

- **cs\_user\_POSTPROCESS\_VAR.f90**

Post-processing related subroutines.
