## 1 Introduction

### 1.1 Aim

The default *biblatex*'s styles provide an entry type called @bookinbook. However, it can happen, especially in classical philology, that a book is edited in other entry type. For example a book can be edited in article, in proceedings, in a thesis etc. This package provides new bibliographic entry types.

### 1.2 History

Originally, the package was called *biblatex-bookinarticle*, because it provided only a new @bookinarticle entry type. However, many new types were added. Changing the name was required, and when the loading's way has changed, a good occasion happened.

### 1.3 Credits

This package was created for Maïeul Rouquette's phd dissertation<sup>1</sup> in 2014. It is licensed on the *LaTeX Project Public License*<sup>2</sup>.

## 2 What does the package provide?

The package provides:

- New entry types.
- Inheritance's mechanism for these entry types.
- Integration of the entry types following the standard bibliography's styles of *biblatex*.
- Integration of the new fields of the *biblatex-morenames* package.

## 3 Loading package

As the package defines new fields, you must load it as a `bibstyle` option of *biblatex* package.

```
\usepackage[citestyle=yourcitationstyle,bibstyle=bookinother]{biblatex}
```

Notes that the *bookinother* bibliography's style automatically loads verbose bibliography's style, which means it is compatible with all the *verbose-xxx* and *authortitle-xxx* bibliography's styles of *biblatex*, because all of them are identical to the verbose **bibliography style**.

However, if you want to use an other bibliography's style, you can use the *biblatex-multiple-dm* package, but the uniformity can't be assured.

In any case, you can choose your own **citation style**.

If you need to use this package with package which also requires loading *via* the `bibstyle` option, as for example *biblatex-morenames*, just use the *biblatex-multiple-dm* package, in the following way:

```
\usepackage[tools={bookinother,morenames},bibstyle=verbose]{biblatex-multiple-dm}
\usepackage[citestyle=verbose,bibstyle=multiple-dm]{biblatex}
```

If you want to use this package with *alphabetic-xxx* or *numeric-xx* bibliography style, also use the *biblatex-multiple-dm* package, changing the `bibstyle` option.

```
\usepackage[tools={bookinother},bibstyle=numeric]{biblatex-multiple-dm}
\usepackage[citestyle=numeric,bibstyle=multiple-dm]{biblatex}
```

## 4 The new entry types

### 4.1 Using crossref mechanisme

The package provides new entry types in the form of `@bookin<othertype>`. The best way to manage these entry types is to use the crossref mechanism of `biber`. So the `crossref` field of a `@bookin<othertype>` entry should refer to the main `@<othertype>` entry.

The package also provides new `@in<othertype>` entry types. The only differences with the `@bookin<othertype>` entry types is that the title is, with standard styles, printed in roman font and wrapped in quotation marks.

### 4.2 Fields

In the following parts of this handbook, we will describe, for each entry type, the fields inheritance mechanism.

Here is a list of fields which are NOT inherited :

- `author` means the author of the edited (ancient) book.
- `bookineditor` means the editor of the edited (ancient) book.
- `title` means the title of the edited (ancient) book.
- `subtitle` means the subtitle of the edited (ancient) book.

If you use the `ineditor` field of the `biblatex-morenames` package, it will be inherited as `bookeditor` field.

Notes that the package take account of the `maineditor` field of the `biblatex-morenames` package, if loaded.

Paris-IV, 1972, pp. 195–291

#### 4.9.5 About the type of thesis

As for the standard @thesis entry type, a @bookinthesis can contain a type field containing one the following key:

**mathesis** For a master’s thesis.

**phdthesis** For a phd’s thesis.

**candthesis** For a candidate’s thesis.

The value of this field is automatically inherited from the main entry. The package also provides two entry types:

Figure 7: Inheritance related to the @bookinthesis entry type

- `@bookinmathesis` for book edited in a `@mathesis`;
- `@bookinphdthesis` for book edited in a `@phdthesis`.

## 5 Customization

The ways new entry types are printed are derived from the standard `.bbx` bibliography's style. You can customize it by overriding bibliographic macros or bibliographic drivers. Look at the `bookinother.bbxfile`.
